Educational Program Focus

Agriculture

To provide educational programming and assistance to the farmers and ranchers of Washington County who represent over 10,000 acres of crop land and nearly 10,000 head of cattle. Educational opportunities in the areas of crop production, pest and weed management, livestock production, herd health and management, and forage production are made available to stakeholders through presentations, newsletters and factsheets, website, and individual consultations. Additional programs in the area of youth animal science are also provided.

Natural Resources

To provide educational programming and assistance to the owners/managers of the more than 200,000 acres of forested land and the countless lakes and small ponds in Washington County. Additional educational programming focuses on the interaction between production agriculture and the natural resources of the county. Educational opportunities are available to stakeholders through presentations, newsletters and factsheets, website, and individual consultations.
